Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 2 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Receipt and entry of Applicant's Preliminary Amendment filed on December 31, 2003 is acknowledged.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: "*an angle between the operating surfacesis greater than an angle between the operating surfaces in the forward rotation...predetermined value*" recited in claim 9 and "*the angle between the reference lineis between 45 and 90 degrees*" recited in claim 10. Applicant should also note that their subject matter needs to be incorporated into the specification and the drawings.

3. A substitute specification excluding the claims is required pursuant to 37 CFR 1.125(a) because as set forth above.

Art Unit: 3748

A substitute specification filed under 37 CFR 1.125(a) must only contain subject matter from the original specification and any previously entered amendment under 37 CFR 1.121. If the substitute specification contains additional subject matter not of record, the substitute specification must be filed under 37 CFR 1.125(b) and (c).

Conclusion

This application is in condition for allowance except for the following formal matters as set forth above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and consists of six patents.

Wada et al. (Patent Number 5,474,434) disclose a scroll type compressor having a radial scroll clearance during reverse rotation and improper assembly prevention.

Monnier et al. (Patent Number 6,106,251) disclose a scroll machine with reverse rotation sound attenuation.

Fennochi (Patent Number 6,428,294) discloses a scroll compressor with slider block having circular inner bore.

Sun (Patent Number 6,471,499) discloses a scroll compressor with lubrication directed to drive flat surfaces.

Art Unit: 3748

Takimoto et al. (Publication Number JP 05-248371) discloses a scroll compressor having two specific places of different angles to a slider pin provided on a drive shaft.

Kim et al. (Publication Number KR 2001-057496) disclose a slide bush of scroll compressor.
